1. SAFETY PRECAUTIONS

- Be sure to read this Manual thoroughly before installation.
- The warnings and precautions indicated in this Manual contain important information pertaining to your safety. Be sure to observe them.
- Hand this Manual, together with the Operating Manual, to the customer. Request the customer to keep them on hand for future use, such as for relocating or repairing the unit.

 WARNING	This mark indicates procedures which, if improperly performed, might lead to the death or serious injury of the user.
Request your dealer or a professional installer to install the indoor unit in accordance with this Installation Manual. An improperly installed unit can cause serious accidents such as water leakage, electric shock, or fire. If the indoor unit is installed in disregard of the instructions in the Installation Manual, it will void the manufacturer's warranty.	
Do not turn ON the power until all work has been completed. Turning ON the power before the work is completed can cause serious accidents such as electric shock or fire.	
If refrigerant leaks while work is being carried out, ventilate the area. If the refrigerant comes in contact with a flame, it produces a toxic gas.	
Installation work must be performed in accordance with national wiring standards by authorized personnel only.	

 CAUTION	This mark indicates procedures which, if improperly performed, might possibly result in personal harm to the user, or damage to property.
Read carefully all security information before use or install the air conditioner.	
Do not attempt to install the air conditioner or a part of the air conditioner by yourself.	
This unit must be installed by qualified personnel with a capacity certificate for handling refrigerant fluids. Refer to regulation and laws in use on installation place.	
The installation must be carried out in compliance with regulations in force in the place of installation and the installation instructions of the manufacturer.	
This unit is part of a set constituting an air conditioner. It must not be installed alone or with non-authorized by the manufacturer.	

Always use a separate power supply line protected by a circuit breaker operating on all wires with a distance between contact of 3mm for this unit.
The unit must be correctly earthed (grounded) and the supply line must be equipped with a differential breaker in order to protect the persons.
The units are not explosion proof and therefore should not be installed in explosive atmosphere.
Never touch electrical components immediately after the power supply has been turned off. Electric shock may occur. After turning off the power, always wait 5 minutes before touching electrical components.
This unit contains no user-serviceable parts. Always consult authorized service personnel to repairs.
When moving, consult authorized service personnel for disconnection and installation of the unit.
This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance.

2. ABOUT THE UNIT

2.1. Precautions for using R410A refrigerant

 WARNING
Do not introduce any substance other than the prescribed refrigerant into the refrigeration cycle. If air enters the refrigeration cycle, the pressure in the refrigeration cycle will become abnormally high and cause the piping to rupture.
If there is a refrigerant leak, make sure that it does not exceed the concentration limit. If a refrigerant leak exceeds the concentration limit, it can lead to accidents such as oxygen starvation.
Do not touch refrigerant that has leaked from the refrigerant pipe connections or other area. Touching the refrigerant directly can cause frostbite.
If a refrigerant leak occurs during operation, immediately vacate the premises and thoroughly ventilate the area. If the refrigerant comes in contact with a flame, it produces a toxic gas.

2.2. Special tool for R410A

 WARNING
To install a unit that uses R410A refrigerant, use dedicated tools and piping materials that have been manufactured specifically for R410A use. Because the pressure of R410A refrigerant is approximately 1.6 times higher than the R22, failure to use dedicated piping material or improper installation can cause rupture or injury. Furthermore, it can cause serious accidents such as water leakage, electric shock, or fire.

Tool name	Changes
Gauge manifold	The pressure in the refrigerant system is extremely high and cannot be measured with a conventional gauge. To prevent erroneous mixing of other refrigerants, the diameter of each port has been changed. It is recommended to use a gauge manifold with a high pressure display range of -0.1 to 5.3 MPa and a low pressure display range of -0.1 to 3.8 MPa.
Charging hose	To increase pressure resistance, the hose material and base size were changed. (The charging port thread diameter for R410A is 1/2 UNF 20 threads per inch.)
Vacuum pump	A conventional vacuum pump can be used by installing a vacuum pump adapter. Be sure that the pump oil does not back flow into the system. Use one capable for vacuum suction of -100.7 kPa (5 Torr, -755 mmHg).
Gas leakage detector	Special gas leakage detector for R410A refrigerant.

2.3. Accessories

 WARNING
For installation purposes, be sure to use the parts supplied by the manufacturer or other prescribed parts. The use of non-prescribed parts can cause serious accidents such as the unit to fall, water leakage, electric shock, or fire.

- The following installation parts are furnished. Use them as required.
- Keep the Installation Manual in a safe place and do not discard any other accessories until the installation work has been completed.

Name and Shape	Q'ty	Description
Operating Manual 	1	
Installation Manual 	1	(This book)
Template (Carton top) 	1	For installing indoor unit
Washer 	8	For installing indoor unit
Coupler heat insulation (Large) 	1	For indoor side pipe joint (Gas pipe)
Coupler heat insulation (Small) 	1	For indoor side pipe joint (Liquid pipe)
Insulation 	1	For installing drain pipe
Drain hose 	1	For installing drain pipe VP25 (O.D.32, I.D.25)
Hose Band 	1	For installing drain hose
Drain hose heat insulation 	1	For installing drain pipe
Cable tie (Large) 	3	For electrical wiring
Cable tie (Small) 	1	For electrical wiring (Wired remote controller)
Wired remote controller 	1	
Remote controller cable(*1) 	1	For connecting the remote controller
Screw (M4 × 16) 	2	For installing the remote controller

(*1) This part is not furnished for AUT* series

2.4. Optional parts

Parts name	Model No.	Summary
IR receiver unit	UTY-LRH*A2	For air conditioner operation
Wired Remote Controller	UTY-RNN*M	For air conditioner operation
Air outlet shutter plate	UTR-YDZC	Install the plate at outlet when carrying out 3-way direction operation
Insulation kit for High humidity	UTZ-KXGA	

External connect kit	UTY-XWZX	For control input/output port
Fresh air intake kit	UTZ-VXGA	To take fresh air
Wide panel	UTG-AGYA-W	Wide panel hides the gap between the ceiling hole and the Cassette grille.
Panel spacer	UTG-BGYA-W	Installation in a space of 56 mm or greater is possible by using panel spacer when the height behind the ceiling is low.

Wired remote controller is recommended using simultaneous twin or triple connection.

3. INSTALLATION WORK

Especially, the installation place is very important for the split type air conditioner because it is very difficult to move from place to place after the first installation.

3.1. Selecting an installation location

Decide the mounting position together with the customer as follows.

⚠ WARNING

Select installation locations that can properly support the weight of the indoor unit. Install the units securely so that they do not topple or fall.

⚠ CAUTION

Do not install the indoor unit in the following areas:

- Area with high salt content, such as at the seaside. It will deteriorate metal parts, causing the parts to fail or the unit to leak water.
- Area filled with mineral oil or containing a large amount of splashed oil or steam, such as a kitchen. It will deteriorate plastic parts, causing the parts to fail or the unit to leak water.
- Area that generates substances that adversely affect the equipment, such as sulfuric gas, chlorine gas, acid, or alkali. It will cause the copper pipes and brazed joints to corrode, which can cause refrigerant leakage.
- Area that can cause combustible gas to leak, contains suspended carbon fibers or flammable dust, or volatile inflammables such as paint thinner or gasoline. If gas leaks and settles around the unit, it can cause a fire.
- Area where animals may urinate on the unit or ammonia may be generated.

Do not install where there is the danger of combustible gas leakage.

Do not install the unit near a source of heat, steam, or flammable gas.

Install the indoor unit, outdoor unit, power supply cable, transmission cable, and remote control cable at least 1 m away from a television or radio receivers. The purpose of this is to prevent TV reception interference or radio noise. (Even if they are installed more than 1 m apart, you could still receive noise under some signal conditions.)

If children may approach the unit, take preventive measures so that they cannot reach the unit.

- (1) Install the indoor unit in a location having sufficient strength to support the weight of the indoor unit.
- (2) The inlet and outlet ports should not be obstructed; the air should be able to blow all over the room.
- (3) Leave the space required to service the air conditioner.
- (4) Locate where the air can be distributed evenly throughout the room by the unit.
- (5) Install the unit where connection to the outdoor unit is easy.
- (6) Install the unit where the connection pipe can be easily installed.
- (7) Install the unit where the drain pipe can be easily installed.
- (8) Install the unit where noise and vibration is not amplified.
- (9) Take servicing, etc., into consideration and leave the spaces. Also install the unit where the filter can be removed.

3.2. Installation dimension

- The ceiling rear height as shown in the figure.

- This product can be installed at a height of up to 4.2 m (30 model: 3.6 m). However, if the heights of the ceiling is higher than 3.2 m or lower than 2.7 m, it is necessary to set the position from remote controller. (See 9.2.Function setting)

Discharge direction setting

- The discharge direction can be selected as shown below.

- For a 3-way outlet, make sure to perform the Function Setting on the remote control. Also, make sure to use the optional shutter plate to block the outlet.
- The ceiling height cannot be set in the 3-way outlet mode. Therefore, do not change the setting in the setting the ceiling height. (See 9.2. FUNCTION SETTING)
- When the outlet is shut, be sure to install the optional Air outlet shutter plate kit. For the details of installation, please refer to Installation Manual of kit.

3.3. Installation the unit

WARNING

Install the air conditioner in a location which can withstand a load of at least 5 times the weight of the main unit and which will not amplify sound or vibration. If the installation location is not strong enough, the indoor unit may fall and cause injuries.

If the job is done with the panel frame only, there is a risk that the unit will come loose. Please take care.

3.3.1. Position the ceiling hole and hanging bolts

- Positions of the ceiling opening, hanging bolt pitch, piping and ducts.
 - Ceiling opening and hanging bolt pitch.

- Refrigerant piping and drain piping positions.

- Distribution ducts and fresh air inlet positions.

Note

Conduct proper insulation when connecting the distribution ducts and fresh air inlet.

Note

When sucking in the fresh air, please detach the insulation affixed to the drain pan.

- Setting the positions of hanging bolt and ceiling opening.
 - Use an installation template (packaging top surface) to set the positions of the hanging bolt and ceiling opening and drill holes.
- Hanging structure.
 - Select a strong structure for the hanging location.
 - If necessary, reinforce the hanging bolt with quake proof columnar support material to prevent shaking.
 - Use hanging bolts of M8-M10.

3.3.2. Body installation

- Install the attached washer and nut (prepared on site) onto the hanging bolt.
- Hook the body onto the hanging bolt.
- Adjust the dimensions of the ceiling surface from the body. After installing the decorative panel, you can make fine adjustment of the height of the body. For details, refer to the Installation Manual of the decorative panel.

WARNING

Perform final tightening by tightening the double nut firmly.

Be sure to install the body horizontally and adjust the height below the body and the ceiling surface properly.

3.3.3. Leveling

Using a level, or vinyl hose filled with water, fine adjust so that the body is level.

Inclined installation so as the drain pipe side is higher may cause a malfunction of the float switch, and may cause water leakage.

4. PIPE INSTALLATION

CAUTION

Be careful that foreign matter (oil, water, etc.) does not enter the piping with refrigerant R410A models. Also, when storing the piping, securely seal the openings by pinching, taping, etc.

While brazing the pipes, be sure to purge with dry nitrogen gas.

4.1. Selecting the pipe material

CAUTION

Do not use existing pipes.

Use pipes that have clean external and internal sides without any contamination which may cause trouble during use, such as sulfur, oxide, dust, cutting waste, oil or water.

It is necessary to use seamless copper pipes.

Material: Phosphor deoxidized seamless copper pipes.

It is desirable that the amount of residual oil is less than 40 mg/10 m.

Do not use copper pipes that have a collapsed, deformed, or discolored portion (especially on the interior surface). Otherwise, the expansion valve or capillary tube may become blocked with contaminants.

Improper pipe selection will degrade performance. As an air conditioner using R410A incurs pressure higher than when using conventional refrigerant, it is necessary to choose adequate materials.

- Thicknesses of copper pipes used with R410A are as shown in the table.
- Never use copper pipes thinner than those indicated in the table even if they are available on the market.

Thicknesses of Annealed Copper Pipes (R410A)

Pipe outside diameter [mm (in.)]	Thickness [mm]
6.35 (1/4)	0.80
9.52 (3/8)	0.80
12.70 (1/2)	0.80
15.88 (5/8)	1.00
19.05 (3/4)	1.20

4.2. Pipe requirement

CAUTION

Refer to the Installation Manual of the outdoor unit for description of the length and the diameter of connecting pipe or for difference of its elevation.

Diameter [mm (in.)]	Liquid	9.52 (3/8)
	Gas	15.88 (5/8)

- Use pipe with water-resistant heat insulation.

CAUTION

Install heat insulation around both the gas and liquid pipes. Failure to do so may cause water leaks.

Use heat insulation with heat resistance above 120 °C. (Reverse cycle model only)

In addition, if the humidity level at the installation location of the refrigerant piping is expected to exceed 70%, install heat insulation around the refrigerant piping. If the expected humidity level is 70-80%, use heat insulation that is 15 mm or thicker and if the expected humidity exceeds 80%, use heat insulation that is 20 mm or thicker. If heat insulation is used that is not as thick as specified, condensation may form on the surface of the insulation.

In addition, use heat insulation with heat conductivity of 0.045W/(m·K) or less (at 20 °C).

4.3. Flare connection (pipe connection)

4.3.1. Flaring

- Use special pipe cutter and flare tool exclusive for R410A.

(1) Cut the connection pipe to the necessary length with a pipe cutter.

(2) Hold the pipe downward so that cuttings will not enter the pipe and remove any burrs.

(3) Insert the flare nut (always use the flare nut attached to the indoor and outdoor units respectively) onto the pipe and perform the flare processing with a flare tool. Leakage of refrigerant may result if other flare nuts are used.

(4) Protect the pipes by pinching them or with tape to prevent dust, dirt, or water from entering the pipes.

Pipe outside diameter [mm (in.)]	Dimension A [mm] Flare tool for R410A, clutch type	Dimension B _{0.4} [mm]
6.35 (1/4)	0 to 0.5	9.1
9.52 (3/8)		13.2
12.70 (1/2)		16.6
15.88 (5/8)		19.7
19.05 (3/4)		24.0

When using conventional flare tools to flare R410A pipes, the dimension A should be approximately 0.5 mm more than indicated in the table (for flaring with R410A flare tools) to achieve the specified flaring. Use a thickness gauge to measure the dimension A.

Pipe outside diameter [mm (in.)]	Width across flats of Flare nut [mm]
6.35 (1/4)	17
9.52 (3/8)	22
12.70 (1/2)	26
15.88 (5/8)	29
19.05 (3/4)	36

4.3.2 Bending pipes

- If pipes are shaped by hand, be careful not to collapse them.
- Do not bend the pipes at an angle more than 90°.
- When pipes are repeatedly bend or stretched, the material will harden, making it difficult to bend or stretch them any more.
- Do not bend or stretch the pipes more than 3 times.

CAUTION

To prevent breaking of the pipe, avoid sharp bends.

If the pipe is bent repeatedly at the same place, it will break.

4.3.3. Pipe connection

CAUTION

Be sure to connect the pipe against the port on the indoor unit and the outdoor unit correctly. If the centering is improper, the flare nut cannot be tightened smoothly. If the flare nut is forced to turn, the threads will be damaged.

Do not remove the flare nut from the indoor unit pipe until immediately before connecting the connection pipe.

Do not use mineral oil on flared part. Prevent mineral oil from getting into the system as this would reduce the lifetime of the units.

(1) Detach the caps and plugs from the pipes.

(2) Center the pipe against the port on the indoor unit, and then turn the flare nut by hand.

(3) When the flare nut is tightened properly by your hand, hold the body side coupling with a separate spanner, then tighten with a torque wrench. (See the table below for the flare nut tightening torques.

CAUTION

Hold the torque wrench at its grip, keeping it in the right angle with the pipe, in order to tighten the flare nut correctly.

Tighten the flare nuts with a torque wrench using the specified tightening method. Otherwise, the flare nuts could break after a prolonged period, causing refrigerant to leak and generate a hazardous gas if the refrigerant comes into contact with a flame.

Flare nut [mm (in.)]	Tightening torque [N·m (kgf·cm)]
6.35 (1/4) dia.	16 to 18 (160 to 180)
9.52 (3/8) dia.	32 to 42 (320 to 420)
12.70 (1/2) dia.	49 to 61 (490 to 610)
15.88 (5/8) dia.	63 to 75 (630 to 750)
19.05 (3/4) dia.	90 to 110 (900 to 1,100)

4.4. Installing heat insulation

CAUTION

After checking for gas leaks (refer to the Installation Manual of the outdoor unit), perform this section.

Install heat insulation around both the large (gas) and small (liquid) pipes. Failure to do so may cause water leaks.

After checking for gas leaks, insulate by wrapping insulation around the 2 parts (gas and liquid) of the indoor unit coupling, using the Coupler Heat Insulation. After installing the Coupler Heat Insulation, wrap both ends with vinyl tape so that there is no gap.

CAUTION

Must fit tightly against body without any gap.

5. INSTALLING DRAIN PIPES

WARNING

- Do not insert the drain piping into the sewer where sulfurous gas occurs. (Heat exchange erosion may occur.)
- Insulate the parts properly so that water will not drip from the connection parts.
- Check for proper drainage after the construction by using the visible portion of transparent drain port and the drain piping final outlet on the body.

CAUTION

- Do not apply adhesive agent on the drain port of the body. (Use the attached drain hose and connect the drain piping.)

Note

Install the drain pipe.

- Install the drain pipe with downward gradient (1/50 to 1/100) and so there are no rises or traps in the pipe.
- Use general hard polyvinyl chloride pipe (VP25) [outside diameter 32 mm] and connect it with adhesive (polyvinyl chloride) so that there is no leakage.
- When the pipe is long, install supporters.
- Do not perform air bleeding.
- Always heat insulate the indoor side of the drain pipe.
- If it is impossible to have sufficient gradient of pipe, perform drain lift-up.

Drain pipe	Pipe size
	VP25 (O.D. 32 mm)

PROHIBITED:

When lifting up drain:

- Height of inclined pipe should be less than 850 mm from the ceiling. A rise dimension over this range will cause leakage.
- Lift up the pipe vertically at the position of 300 mm or less from the unit.

Working procedure

- Install the attached drain hose to the drain port of the body. Attach hose band on top of the drain hose.
- Use vinyl adhesive agent to glue the drain piping (PVC pipe VP25) which is prepared on site or elbow socket. (Apply color adhesive agent evenly until the gauge line and seal.)
- Check the drainage. (See Note)
- Install the heat insulation.
- Use the attached heat insulation to insulate the drain port and band parts of the body.

Note

Check for drainage

Pour about 1 liter of water from the position shown in the diagram or from the airflow outlet to the dew tray. Check for any abnormalities such as strange noises and whether the drain pump functions normally.

6. ELECTRICAL WIRING

Cable	Cable size (mm ²)	Type	Remarks
Connection cable	1.5 (MIN.)	Type 60245 IEC57	3Cable+Earth (Ground), 1φ230V

Max. Cable Length: Limit voltage drop to less than 2%. Increase cable gauge if voltage drop is 2% or more.

⚠ WARNING

Electrical work must be performed in accordance with this Manual by a person certified under the national or regional regulations. Be sure to use a dedicated circuit for the unit. An insufficient power supply circuit or improperly performed electrical work can cause serious accidents such as electric shock or fire.

Before starting work, check that power is not being supplied to the indoor unit and outdoor unit.

Use the included transmission cables and power cables or ones specified by the manufacturer. Improper connections, insufficient insulation, or exceeding the allowable current can cause electric shock or fire.

For wiring, use the prescribed type of wires, connect them securely, making sure that there are no external forces of the wires applied to the terminal connections. Improperly connected or secured wires can cause serious accidents such as overheating the terminals, electric shock, or fire.

Do not modify the power cables, use extension cables, or use any branches in the wiring. Improper connections, insufficient insulation, or exceeding the allowable current can cause electric shock or fire.

Match the terminal block numbers and connection cable colors with those of the outdoor unit. Erroneous wiring may cause burning of the electric parts.

Securely connect the connection cables to the terminal blocks. In addition, secure the cables with wiring holders. Improper connections, either in the wiring or at the ends of the wiring, can cause a malfunction, electric shock, or fire.

Always fasten the outside covering of the connection cable with the cable clamp. (If the insulator is chafed, electric leakage may occur.)

Securely install the electrical box cover on the unit. An improperly installed electrical box cover can cause serious accidents such as electric shock or fire through exposure to dust or water.

Install sleeves into any holes made in the walls for wiring. Otherwise, a short circuit could result.

Install a earth (ground) leakage breaker. In addition, install the earth (ground) leakage breaker so that the entire AC main power supply is cut off at the same time. Otherwise, electric shock or fire could result.

Always connect the earth (ground) wire. Improper earthing (grounding) work can cause electric shocks.

Install the remote controller cable and bus wire so as not to be direct touched with your hand.

- (1) Use ring terminals with insulating sleeves as shown in the figure below to connect to the terminal block.
- (2) Securely clamp the ring terminals to the wires using an appropriate tool so that the wires do not come loose.
- (3) Use the specified wires, connect them securely, and fasten them so that there is no stress placed on the terminals.
- (4) Use an appropriate screwdriver to tighten the terminal screws. Do not use a screwdriver that is too small, otherwise, the screw heads may be damaged and prevent the screws from being properly tightened.
- (5) Do not tighten the terminal screws too much, otherwise, the screws may break.
- (6) See the table 1 for the terminal screw tightening torques.

Table 1

Tightening torque [N·m (kgf·cm)]	
M4 screw	1.2 to 1.8 (12 to 18)
M5 screw	2.0 to 3.0 (20 to 30)

⚠ WARNING

Use ring terminals and tighten the terminal screws to the specified torques, otherwise, abnormal overheating may be produced and possibly cause heavy damage inside the unit.

6.1. Wiring system diagram

Connection cable to outdoor unit

Wired remote controller cable (Option)

*Ground the remote controller if it has a earth (ground) wire.

CAUTION

Tighten the indoor unit connection cable and power supply indoor and outdoor unit, terminal board connections firmly with the terminal board screws. Faulty connection may cause a fire.

If the indoor unit connection cable and power supply are wired incorrectly, the air conditioner may be damaged.

Connect the indoor unit connection cable by matching the numbers of the outdoor and indoor units terminal board numbers as shown in terminal label.

Earth (Ground) both the indoor and outdoor, units by attaching an earth (ground) cable.

Unit shall be earthed (grounded) in compliance with the applicable local and national cables.

CAUTION

Be sure to refer to the above diagram for do correct field wiring. Wrong wiring causes malfunction of the unit.

Check local electrical rules and also any specific wiring instructions or limitation.

6.2. Connection cable preparation

Keep the earth (ground) wire longer than the other wires.

- Use a 4-core wire cable.

6.3. Connection of wiring

- (1) Remove the control box cover and install each connection wire. Please firmly tighten connection cable and remote controller cable with the attached cable tie.

Detail (a)

Detail (b)

- (2) Please fix the connection cable with cable clamp. And then install the wire cover with screws.

- (3) Install control box cover.

CAUTION

Do not wire the remote controller cable together with or parallel to the connection cables, and power supply cables of the INDOOR UNIT and OUTDOOR UNIT, It may cause erroneous operation.

7. REMOTE CONTROLLER SETTING

CAUTION

When detecting the room temperature using the remote controller, please set up the remote controller according to the following conditions. If the remote controller is not located properly, the correct room temperature will not be detected, and thus abnormal conditions like "not cooled" or "not heated" will occur even if the air-conditioner is running normally.

- Locate where an average temperature for the room being air conditioned will be sensed.
- Do not locate directly exposed to the outlet air from the air-conditioner.
- Locate out of direct sunlight.
- Locate away from the influence of other heat sources.

Do not touch the remote controller PC board and PC board parts directly with your hands.

Do not wire the remote controller cable together with or parallel to the connection cables, and power supply cable of the INDOOR UNIT and OUTDOOR UNIT, It may cause erroneous operation.

When installing the bus wire near a source of electromagnetic waves, use shielded wire.

Do not set the DIP switches, either on the air conditioner or the remote controller, in any way other than indicated in this manual that is supplied with the air conditioner. Doing so may result in improper operation.

7.1. Installing the remote controller

Open the operation panel on the front of the remote controller, remove the 2 screws indicated in the following figure, and then remove the front case of the remote controller.

When installing the remote controller, remove the connector from the front case. The wires may break if the connector is not removed and the front case hangs down. When installing the front case, connect the connector to the front case.

When remote controller cable is concealed

- (1) Conceal the remote controller cable.
- (2) Pass the remote controller cable through the hole in the rear case and connect the remote controller cable to the remote controller terminal board specified in figure.
- (3) Clamp the remote controller cable sheath with the cable tie as shown in figure.
- (4) Cut off the excess cable tie.
- (5) Install the rear case to the wall, box, etc., with 2 screws figure.

[Example]

Ground the remote controller if it has a ground wire.

Unit: mm

CAUTION

Install the remote controller wires so as not to be direct touched with your hand.

Do not touch the remote controller PC board and PC board parts directly with your hands.

7.2. Setting the dip switches

Set the remote controller DIP switches.

[Example]

	NO.	SW state		Detail
		OFF	ON	
DIP switch 1	1	* ◆		Cannot be used. (Do not change)
	2	* ◆		Dual remote controller setting * Refer to 14.2. Dual remote controllers
	3	◆		Cannot be used. (Do not change.)
	4	◆		Cannot be used. (Do not change)
	5	◆		Cannot be used. (Do not change)
	6	* ◆ Invalidity	* Validity	Memory backup setting * Set to ON to use batteries for the memory backup. If batteries are not used, all of the settings stored in memory will be deleted if there is a power failure.

(◆ : Factory setting)

8. CASSETTE GRILLE INSTALLATION

- Install according to the Installation instruction sheet for Cassette grille.
- Be sure to confirm there is no gap between the panel and main unit after installing the Cassette grille.

9. FUNCTION SETTING

9.1. Turning on the power

- (1) Check the remote controller wiring and DIP switch settings.
- (2) Install the front case.
When installing the front case, connect the connector to the front case.
- (3) Check the indoor and outdoor unit wiring and circuit board switch settings, and then turn on the indoor and outdoor units. After "9C" has flashed on the set temperature display for several seconds, the clock display will appear in the center of the remote controller display.

The clock display will appear in the center of the remote controller display.

9.2. Function setting

This procedure changes the function settings used to control the indoor unit according to the installation conditions. Incorrect settings can cause the indoor unit to malfunction. This procedure should be performed by authorized installation or service personnel only.

Perform the "FUNCTION SETTING" according to the installation conditions using the remote controller. (Refer to the indoor unit installation manual for details on the function numbers and setting values.)

- (1) Press the SET TEMP. buttons (V) (Λ) and FAN button simultaneously for more than 5 seconds to enter the function setting mode.

- (2) Press the SET BACK button to select the indoor unit number.

- (3) Press the SET TIME (<) (>) buttons to select the function number.

- (4) Press the SET TEMP. buttons (V) (Λ) to select the setting value.
The display flashes as shown to the right during setting value selection.

- (5) Press the TIMER SET button to confirm the setting.
Press the TIMER SET button for a few seconds until the setting value stops flashing.
If the setting value display changes or if "- -" is displayed when the flashing stops, the setting value has not been set correctly.
(An invalid setting value may have been selected for the indoor unit.)

- (6) Repeat steps 2 to 5 to perform additional settings.
Press the SET TEMP. buttons (V) (Λ) and FAN button simultaneously again for more than 5 seconds to cancel the function setting mode. In addition, the function setting mode will be automatically canceled after 1 minute if no operation is performed.
- (7) After completing the FUNCTION SETTING, be sure to turn off the power and turn it on again.

CAUTION

After turning off the power, wait 30 seconds or more before turning it on again. The FUNCTION SETTING doesn't become effective if it doesn't do so.

• Function Details

(1) Filter sign

The indoor unit has a sign to inform the user that it is time to clean the filter. Select the time setting for the filter sign display interval in the table below according to the amount of dust or debris in the room. If you do not wish the filter sign to be displayed, select the setting value for "No indication".

(◆... Factory setting)

Setting description	Function number	Setting value
Standard (2,500 hours)	11	00
Long interval (4,400 hours)		01
Short interval (1,250 hours)		02
No indication		03

(2) Ceiling height

Select the setting values in the table below according to the height of the ceiling.

(◆... Factory setting)

Setting description	Function number	Setting value
Standard (3.2m)	20	00
High ceiling (4.2m) (30 model : 3.6m)		01
Low ceiling (2.7m)		02

The ceiling height values are for the 4-way outlet. Do not change this setting in the 3-way outlet mode.

(3) Outlet directions

Select the setting values in the table below for using a 3-way outlet.

(◆... Factory setting)

Setting description	Function number	Setting value
4-way	22	00
3-way		01

(4) Vertical direction adjusting scope

To prevent from draft, we recommend using "upward mode".

(◆... Factory setting)

Setting Description	Function Number	Setting Value
Standard	23	00
Upward		01

(5) Cooling room temperature correction

Depending on the installed environment, the room temperature sensor may require a correction.

The settings may be selected as shown in the table below.

(◆... Factory setting)

Setting description	Function number	Setting value
◆ Standard	30	00
Slightly lower control		01
Lower control		02
Warmer control		03

(6) Heating room temperature correction

Depending on the installed environment, the room temperature sensor may require a correction.

The settings may be changed as shown in the table below.

(◆... Factory setting)

Setting description	Function number	Setting value
◆ Standard	31	00
Lower control		01
Slightly warmer control		02
Warmer control		03

(7) Auto restart

Enable or disable automatic system restart after a power outage.

(◆... Factory setting)

Setting description	Function number	Setting value
◆ Yes	40	00
No		01

* Auto restart is an emergency function such as for power failure etc. Do not start and stop the indoor unit by this function in normal operation. Be sure to operate by the control unit, or external input device.

(8) Indoor room temperature sensor switching function

(Only for Wired remote controller)

The following settings are needed using the Wired remote controller temperature sensor

(◆... Factory setting)

Setting description	Function number	Setting value
◆ No	42	00
Yes		01

* If setting value is "00":

Room temperature is controlled by the indoor unit temperature sensor.

* If setting value is "01":

Room temperature is controlled by either indoor unit temperature sensor or remote controller unit sensor.

(9) Wireless remote controller signal code

Change the indoor unit Signal Code, depending on the wireless remote controllers.

(◆... Factory setting)

Setting description	Function number	Setting value
◆ A	44	00
B		01
C		02
D		03

(10) External input control

"Operation/Stop" mode or "Forced stop" mode can be selected.

(◆... Factory setting)

Setting description	Function number	Setting value
◆ Operation/Stop mode	46	00
(Setting forbidden)		01
Forced stop mode		02

Setting record

- Record any changes to the settings in the following table.

Setting	Setting Value
(1) Filter sign	
(2) Ceiling height	
(3) Outlet directions	
(4) Vertical direction adjusting scope	

(5) Cooler room temperature correction	
(6) Heater room temperature correction	
(7) Auto restart	
(8) Indoor room temperature sensor switching function	
(9) Wireless remote controller signal code	
(10) External input control	

After completing the FUNCTION SETTING, be sure to turn off the power and turn it on again.

SETTING THE ROOM TEMPERATURE DETECTION LOCATION

The detection location of the room temperature can be selected from the following 2 examples. Choose the detection location that is best for the installation location.

A. Indoor unit setting (factory setting)

The room temperature is detected by the indoor unit temperature sensor.

- (1) When the THERMO SENSOR button is pressed, the lock display flashes because the function is locked at the factory.

B. Indoor unit/remote controller setting (room temperature sensor selection)

The temperature sensor of the indoor unit or the remote controller can be used to detect the room temperature.

- (1) Enable the room temperature sensor selection in FUNCTION SETTING, which will be previous page.
- (2) Press the THERMO SENSOR button for 5 seconds or more to select the temperature sensor of the indoor unit or the remote controller.

NOTES

If the function to change the temperature sensor is used as shown in examples A (other than example B), be sure to lock the detection location. If the function is locked, the lock display  will flash when the THERMO SENSOR button is pressed.

CAUTION	
① 	When select the "Remote controller setting", if the detected temperature value between the temperature sensor of the indoor unit and the temperature sensor of the remote controller varies significantly, it is likely to return to the control status of temperature sensor of the indoor unit temporarily.
②	As the temperature sensor of remote controller detects the temperature near the wall, when there is a certain difference between the room temperature and the wall temperature, the sensor will not detect the room temperature correctly sometimes. Especially when the outer side of the wall on which the sensor is positioned is exposed to the open air, it is recommended to use the temperature sensor of the indoor unit to detect the room temperature when the indoor and outdoor temperature difference is significant.
③	The temperature sensor of the remote controller is not only used when there is a problem in the detection of the temperature sensor of the indoor unit.

10. SPECIAL INSTALLATION METHODS

This possible only the wired remote controller (Option)

CAUTION

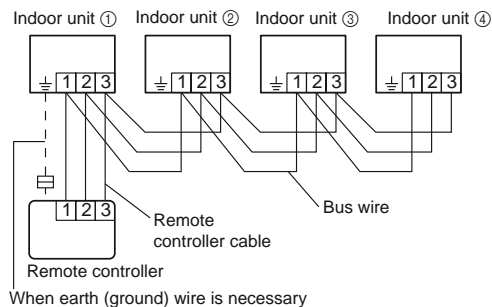

When setting DIP switches, do not touch any other parts on the circuit board directly with your bare hands.

Be sure to turn off the main power.

10.1. Group control system

A number of indoor units can be operated at the same time using a single remote controller.

(1) Wiring method (indoor unit to remote controller)

(2) DIP switch setting (Indoor unit)

Set the unit number of each indoor unit using the DIP switches on the indoor unit circuit board. (See the following table and figure.)

The DIP switches are normally set to make the unit number 00.

Indoor unit	Unit number	DIP SWITCH No.			
		1	2	3	4
①	00	OFF	OFF	OFF	OFF
②	01	ON	OFF	OFF	OFF
③	02	OFF	ON	OFF	OFF
④	03	ON	ON	OFF	OFF
⑤	04	OFF	OFF	ON	OFF
⑥	05	ON	OFF	ON	OFF
⑦	06	OFF	ON	ON	OFF
⑧	07	ON	ON	ON	OFF
⑨	08	OFF	OFF	OFF	ON
⑩	09	ON	OFF	OFF	ON
⑪	10	OFF	ON	OFF	ON
⑫	11	ON	ON	OFF	ON
⑬	12	OFF	OFF	ON	ON
⑭	13	ON	OFF	ON	ON
⑮	14	OFF	ON	ON	ON
⑯	15	ON	ON	ON	ON

Example : unit number 03

NOTE

Be sure to set the unit numbers sequentially.

(3) Remote controller setting

- Turn on all of the indoor units.
Turn on the indoor unit with the unit number 00 last. (Within 1 minute)
- Set the refrigerant circuit address. (Assign the same number to all of the indoor units connected to an outdoor unit.)

Refrigerant circuit address	Function Number	Setting Value
	02	00~15

- Set the "Primary" and "Secondary" settings. (Set the indoor unit that is connected to the outdoor unit using a transmission cable as the "Primary".)

	Function Number	Setting Value
Primary	51	00
Secondary		01

- After completing the function settings, turn off all of the indoor units, and then turn them back on.

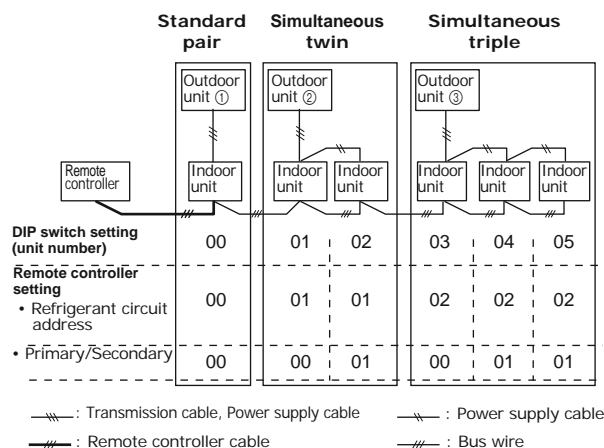

* If error code 21, 22, 24 or 27 is displayed, there may be an incorrect setting. Perform the remote controller setting again.

NOTE

When different indoor unit models are connected using the group control system, some functions may no longer be available.

If the group control system contains multiple units that are operated simultaneously, connect and set the units as shown below.

- Auto-changeover operates under the same mode with model unit number 00.
- It should not be connected to any other Gr that is not of the same series (A**G only).

* Make sure that the indoor unit with the unit number 0 is connected to the outdoor unit using a transmission cable.

10.2. Dual remote controllers

- 2 separate remote controllers can be used to operate the indoor units.
- The timer and self-diagnosis functions cannot be used on the secondary unit of remote controller.

(1) Wiring method (indoor unit to remote controller)

(2) Remote controller DIP switch 1 setting

Set the remote controller DIP switch 1-No. 2 according to the following table.

(Refer to 7.2. Setting the dip switches)

	DIP SW 1-No. 2
Primary unit	OFF
Secondary unit	ON

11. TEST RUN

CHECK ITEMS

- Is operation of each button on the remote controller normal?
 - Do not air flow direction louvers operate normally?
 - Is the drain normal?
 - Is there any error noise and vibration during operation?
- Do not operate the air conditioner test run for a long time.

[Using the wired remote control]

- For the operation method, refer to the operating manual.
- Stop the air conditioner operation.
- Press the MODE button and the FAN button simultaneously for 2 seconds or more to start the test run.

Press the START/STOP button to stop the test run.

If "C0" appears in the unit number display, there is a remote controller error. Refer to the installation manual included with the remote controller.

Unit number	Error code	Content
C0	15	Incompatible indoor unit is connected
C0	12	Indoor unit ↔ remote controller communication error

[Operation method] (Option)

- For the operation method, refer to the operating manual.
- The outdoor unit may not operate depending on the room temperature. In this case, press the TEST RUN button on the remote controller while the air conditioner is running. (Point the transmitter section of the remote controller toward the air conditioner and press the TEST RUN button with the tip of a ball-point pen, etc.)

- To end test operation, press the remote controller START/STOP button. (When the air conditioner is run by pressing the TEST RUN button, the OPERATION Lamp and TIMER Lamp on the optional IR receiver will simultaneously flash slowly.)

13.OPTIONAL KIT INSTALLATION (OPTION)

WARNING

Regulation of cable differs from each locality, refer in accordance with local rules.

This air conditioner can be connected with the following optional kits.

Option type	Connector No.
UTZ-VXGA (Fresh air intake)	CN6
UTY-LRH*A2 (IR Receiver)	CN13
UTY-XWZX (External input)	CN102
UTY-XWZX (External output)	CN103

14.CUSTOMER GUIDANCE

Explain the following to the customer in accordance with the operating manual:

- Starting and stopping method, operation switching, temperature adjustment, timer, air flow switching, and other remote controller unit operations.
 - Air filter removal and cleaning, and how to use the air louvers.
 - Give the operating and Installation Manuals to the customer.
 - If the signal code is changed, explain to the customer how it changed (the system returns to signal code A when the batteries in the remote controller unit are replaced).
- *(4) is applicable to using wireless remote controller.

15.ERROR CODES

If you use a wireless remote controller, the lamp on the photo detector unit will output error codes by way of blinking patterns. If you use a wired type remote controller, error codes will appear on the remote controller display. See the lamp blinking patterns and error codes in the table. An error display is displayed only during operation.

Error display			Wired remote controller Error code	Description
OPERATION lamp (green)	TIMER lamp (orange)	ECONOMY lamp (green)		
●(1)	●(1)	◇	11	Serial communication error
●(1)	●(2)	◇	12	Wired remote controller communication error
●(1)	●(5)	◇	15	Check run unfinished
●(2)	●(1)	◇	21	Unit number or Refrigerant circuit address setting error [Simultaneous Multi]
●(2)	●(2)	◇	22	Indoor unit capacity error
●(2)	●(3)	◇	23	Combination error
●(2)	●(4)	◇	24	• Connection unit number error (indoor secondary unit) [Simultaneous Multi] • Connection unit number error (indoor unit or branch unit) [Flexible Multi]
●(2)	●(7)	◇	27	Primary unit, secondary unit set-up error [Simultaneous Multi]

12.CHECK LIST

Pay special attention to the check items below when installing the indoor unit(s). After installation is complete, be sure to check the following check items again.

CHECK ITEMS	If not performed correctly	CHECK BOX
Has the indoor unit been installed correctly?	Vibration, noise, indoor unit may drop	
Has there been a check for gas leaks (refrigerant pipes)?	No cooling, No heating	
Has heat insulation work been completed?	Water leakage	
Does water drain easily from the indoor units?	Water leakage	
Are the wires and pipes all connected completely?	No operation, heat or burn damage	
Is the connection cable the specified thickness?	No operation, heat or burn damage	
Are the inlets and outlets free of any obstacles?	No cooling, No heating	
After installation is completed, has the proper operation and handling been explained to the user?		

●(3)	●(1)	◇	31	Power supply interruption error
●(3)	●(2)	◇	32	Indoor unit PCB model information error
●(3)	●(5)	◇	35	Manual auto switch error
●(4)	●(1)	◇	41	Inlet air temp. sensor error
●(4)	●(2)	◇	42	Indoor unit Heat Ex. Middle temp. sensor error
●(5)	●(1)	◇	51	Indoor unit fan motor error
●(5)	●(3)	◇	53	Drain pump error
●(5)	●(7)	◇	57	Damper error
●(5)	●(15)	◇	5U	Indoor unit error
●(6)	●(2)	◇	62	Outdoor unit main PCB model information error or communication error
●(6)	●(3)	◇	63	Inverter error
●(6)	●(4)	◇	64	Active filter error, PFC circuit error
●(6)	●(5)	◇	65	Trip terminal L error
●(6)	●(10)	◇	6A	Display PCB microcomputers communication error

1. SAFETY PRECAUTIONS

Be sure to read this Manual carefully before installation.

The warnings and precautions indicated in this Manual contain important information pertaining to your safety. Be sure to observe them.

Hand this Manual, together with the Operating Manual, to the customer. Request the customer to keep them on hand for future use, such as for relocating or repairing the unit.

After installation, explain correct operation to the customer, using the operating manual.

 WARNING	This mark indicates procedures which, if improperly performed, might lead to the death or serious injury of the user.
Never touch electrical components immediately after the power supply has been turned off. Electrical shock may occur. After turning off the power, always wait 10 minutes or more before touching electrical components.	
Request your dealer or a professional installer to install the outdoor unit in accordance with this Installation Manual. An improperly installed unit can cause serious accidents such as water leakage, electric shock, or fire. If the outdoor unit is installed in disregard of the instructions in the Installation Manual, it will void the manufacturer's warranty.	
Do not turn ON the power until all work has been completed. Turning ON the power before the work is completed can cause serious accidents such as electric shock or fire.	
If refrigerant leaks while work is being carried out, ventilate the area. If the refrigerant comes in contact with a flame, it produces a toxic gas.	
Installation work must be performed in accordance with national wiring standards by authorized personnel only.	
Do not use this equipment with air or any other unspecified refrigerant in the refrigerant lines. Excess pressure can cause a rupture.	
During installation, make sure that the refrigerant pipe is attached firmly before you run the compressor. Do not operate the compressor under the condition of refrigerant piping not attached properly with 3-way valve open. This may cause abnormal pressure in the refrigeration cycle that leads to rupture and even injury.	
When installing and relocating the air conditioner, do not mix gases other than the specified refrigerant (R410A) to enter the refrigerant cycle. If air or other gas enters the refrigerant cycle, the pressure inside the cycle will rise to an abnormally high value and cause rupture, injury, etc.	
Do not remove the connection pipe while the compressor is in operation with 3-way valve open. This may cause abnormal pressure in the refrigeration cycle that leads to rupture and even injury.	
For the air conditioner to operate satisfactorily, install it as outlined in this installation manual.	
Connect the indoor unit and outdoor unit with the air conditioner piping and cable available standards parts. This installation manual describes the correct connections using the installation set available from our standard parts.	
Also, do not use an extension cable.	
Do not purge the air with refrigerants but use a vacuum pump to vacuum the installation.	
There is not extra refrigerant in the outdoor unit for air purging.	
Use a vacuum pump for R410A exclusively.	
Using the same vacuum pump for different refrigerants may damage the vacuum pump or the unit.	
Use a clean gauge manifold and charging hose for R410A exclusively.	
During the pump-down operation, make sure that the compressor is turned off before you remove the refrigerant piping. Do not remove the connection pipe while the compressor is in operation with 3-way valve open. This may cause abnormal pressure in the refrigeration cycle that leads to rupture and even injury.	

 CAUTION	This mark indicates procedures which, if improperly performed, might possibly result in personal harm to the user, or damage to property.
Read carefully all security information before use or install the air conditioner.	
Do not attempt to install the air conditioner or a part of the air conditioner by yourself.	
This unit must be installed by qualified personnel with a capacity certificate for handling refrigerant fluids. Refer to regulation and laws in use on installation place.	
The installation must be carried out in compliance with regulations in force in the place of installation and the installation instructions of the manufacturer.	
This unit is part of a set constituting an air conditioner. It must not be installed alone or with non-authorized by the manufacturer.	
Always use a separate power supply line protected by a circuit breaker operating on all wires with a distance between contact of 3mm for this unit.	
The unit must be correctly grounded and the supply line must be equipped with a differential breaker in order to protect the persons.	
The units are not explosion proof and therefore should not be installed in explosive atmosphere.	
This unit contains no user-serviceable parts. Always consult authorized service personnel to repairs.	
When moving, consult authorized service personnel for disconnection and installation of the unit.	
Children should be monitored to ensure they do not play with the device.	
This product is not intended to be used by people (including children) with physical, sensory or mental disability, or persons lacking experience or knowledge unless they have been given by the through a person responsible for their safety, supervision or instruction concerning the use of the device.	

2. ABOUT THE UNIT

2.1. Precautions for using R410A refrigerant

⚠ WARNING

- Do not touch refrigerant that has leaked from the refrigerant pipe connections or other areas. Touching the refrigerant directly can cause frostbite.
- If a refrigerant leak occurs during operation, immediately vacate the premises and thoroughly ventilate the area. If the refrigerant comes in contact with a flame, it produces a toxic gas.
- The basic installation work procedures are the same as conventional refrigerant models. However, pay careful attention to the following points:
- Since the working pressure is 1.6 times higher than that of conventional refrigerant (R22) models, some of the piping and installation and service tools are special. (See the table below.) Especially, when replacing a conventional refrigerant (R22) model with a new refrigerant R410A model, always replace the conventional piping and flare nuts with the R410A piping and flare nuts.
 - Models that use refrigerant R410A have a different charging port thread diameter to prevent erroneous charging with conventional refrigerant (R22) and for safety. Therefore, check beforehand. [The charging port thread diameter for R410A is 1/2 UNF 20 threads per inch.]
 - Be careful that foreign matter (oil, water, etc.) does not enter the piping than with refrigerant models. Also, when storing the piping, securely seal the openings by pinching, taping, etc.
 - When charging the refrigerant, take into account the slight change in the composition of the gas and liquid phases. And always charge from the liquid phase where refrigerant composition is stable.

2.2. Special tools for R410A

⚠ WARNING

To install a unit that uses R410A refrigerant, use dedicated tools and piping materials that have been manufactured specifically for R410A use. Because the pressure of R410A refrigerant is approximately 1.6 times higher than R22, failure to use dedicated piping material or improper installation can cause rupture or injury. Furthermore, it can cause serious accidents such as water leakage, electric shock, or fire.

Tool name	Contents of change
Gauge manifold	Pressure is high and cannot be measured with a conventional gauge. To prevent erroneous mixing of other refrigerants, the diameter of each port has been changed. It is recommended the gauge with seals -0.1 to 5.3 MPa (-1 to 53 bar) for high pressure. -0.1 to 3.8 MPa (-1 to 38 bar) for low pressure.
Charge hose	To increase pressure resistance, the hose material and base size were changed.
Vacuum pump	A conventional vacuum pump can be used by installing a vacuum pump adapter.
Gas leakage detector	Special gas leakage detector for HFC refrigerant R410A.

Copper pipes

It is necessary to use seamless copper pipes and it is desirable that the amount of residual oil is less than 40 mg/10 m. Do not use copper pipes having a collapsed, deformed or discolored portion (especially on the interior surface). Otherwise, the expansion valve or capillary tube may become blocked with contaminants.

As an air conditioner using R410A incurs pressure higher than when using conventional refrigerant, it is necessary to choose adequate materials.

Thicknesses of copper pipes used with R410A are as shown in the table. Never use copper pipes thinner than that in the table even when it is available on the market.

Thicknesses of Annealed Copper Pipes (R410A)

Pipe outside diameter [mm (in.)]	Thickness [mm]
6.35 (1/4)	0.80
9.52 (3/8)	0.80
12.70 (1/2)	0.80
15.88 (5/8)	1.00
19.05 (3/4)	1.20

2.3. Accessories

⚠ WARNING

For installation purposes, be sure to use the parts supplied by the manufacturer or other prescribed parts. The use of non-prescribed parts can cause serious accidents such as the unit falling, water leakage, electric shock, or fire.

- The following installation parts are supplied. Use them as required.
- Keep the Installation Manual in a safe place and do not discard any other accessories until the installation work has been completed.

Name and shape	Q'ty	Description
Installation Manual 	1	This manual
Drain pipe 	1	For outdoor unit drain piping work (May not be supplied, depending on the model.)
Drain cap 	2	
Binder 	3	For binding power supply cable and connection cable
One-touch bush 	2	For power supply cable and connection cable installation

3. INSTALLATION WORK

3.1. Selecting an installation location

⚠ WARNING

Securely install the outdoor unit at a location that can withstand the weight of the unit. Otherwise, the outdoor unit may fall and cause injury.

Be sure to install the outdoor unit as prescribed, so that it can withstand earthquakes and typhoons or other strong winds. Improper installation can cause the unit to topple or fall, or other accidents.

Do not install the outdoor unit near the edge of a balcony. Otherwise, children may climb onto the outdoor unit and fall off of the balcony.

⚠ CAUTION

Do not install the outdoor unit in the following areas:

- Area with high salt content, such as at the seaside. It will deteriorate metal parts, causing the parts to fail or the unit to leak water.
- Area filled with mineral oil or containing a large amount of splashed oil or steam, such as a kitchen. It will deteriorate plastic parts, causing the parts to fail or the unit to leak water.
- Area that generates substances that adversely affect the equipment, such as sulfuric gas, chlorine gas, acid, or alkali. It will cause the copper pipes and brazed joints to corrode, which can cause refrigerant leakage.
- Area containing equipment that generates electromagnetic interference. It will cause the control system to malfunction, preventing the unit from operating normally.
- Area that can cause combustible gas to leak, contains suspended carbon fibers or flammable dust, or volatile inflammables such as paint thinner or gasoline. If gas leaks and settles around the unit, it can cause a fire.
- Area that has heat sources, vapors, or the risk of the leakage of flammable gas in the vicinity.
- Area where small animals may live. It may cause failure, smoke or fire if small animals enter and touch internal electrical parts.
- Area where animals may urinate on the unit or ammonia may be generated.

Do not tilt the outdoor unit more than 3 degrees.

Install the outdoor unit in a well-ventilated location away from rain or direct sunlight.

CAUTION

If the outdoor unit must be installed in an area within easy reach of the general public, install as necessary a protective fence or the like to prevent their access.

Install the outdoor unit in a location that would not inconvenience your neighbors, as they could be affected by the airflow coming out from the outlet, noise, or vibration. If it must be installed in proximity to your neighbors, be sure to obtain their approval.

If the outdoor unit is installed in a cold region that is affected by snow accumulation, snow fall, or freezing, take appropriate measures to protect it from those elements. To ensure a stable operation, install inlet and outlet ducts.

Install the outdoor unit in a location that is away from exhaust or the vent ports that discharge vapor, soot, dust, or debris.

Install the indoor unit, outdoor unit, power supply cable, connection cable, and remote controller cable at least 1 m away from a television or radio receivers. The purpose of this is to prevent TV reception interference or radio noise. (Even if they are installed more than 1 m apart, you could still receive noise under some signal conditions.)

If children under 10 years old may approach the unit, take preventive measures so that they cannot reach the unit.

Keep the length of the piping of the indoor and outdoor units within the allowable range.

For maintenance purposes, do not bury the piping.

3.2. Drain installation

CAUTION

Perform drain work in accordance with this Manual, and ensure that the drain water is properly drained. If the drain work is not carried out correctly, water may drip down from the unit, wetting the furniture.

When the outdoor temperature is 0 °C or less, do not use the accessory drain pipe and drain cap. If the drain pipe and drain cap are used, the drain water in the pipe may freeze in extremely cold weather. (Reverse cycle model only)

- As the drain water flows out of the outdoor unit during heating operation, install the drain pipe and connect it to a commercial 16 mm hose. (Reverse cycle model only)
- When installing the drain pipe, plug all the holes other than the drain pipe mounting hole in the bottom of the outdoor unit with putty so there is no water leakage. (Reverse cycle model only)

(Unit : mm)

3.3. Installation dimensions

CAUTION

The installation space shown in the following examples is based on an ambient temperature under cooling operation of 35 °C (DB) at the air intake of the outdoor unit. Provide more space around the air intake than shown in the examples if the ambient temperature exceeds 35 °C (DB) or if the thermal load of all of the outdoor units exceeds the capacity.

Consider the transportation route, installation space, maintenance space, and access, and install the unit in a location with sufficient space for the refrigerant piping.

Observe the installation space specifications that are shown in the figures.

Keep the same space at rear air intake.

Provide the same space for the air intake at the rear of the outdoor unit.

If the installation is not performed according to the specifications, it could cause a short circuit and result in a lack of operating performance. As a result, the outdoor unit might easily be stopped by high-pressure protection.

Installation methods not shown in the following examples are not recommended. Performance may drop significantly.

3.3.1. Single outdoor unit installation

When the upward area is open (Unit : mm)

(1) Obstacles at rear only

(2) Obstacles at rear and sides only

(3) Obstacles at front only

(4) Obstacles at front and rear only

When an obstruction is present also in the upward area (Unit : mm)

(1) Obstacles at rear and above only

(2) Obstacles at rear, sides, and above only

3.3.2. Multiple outdoor unit installation

- Provide at least 15 mm of space between the outdoor units if multiple units are installed.
- When routing the piping from the side of an outdoor unit, provide space for the piping.
- No more than 3 units must be installed side by side.
When 3 units or more are arranged in a line, provide the space as shown in the following example when an obstruction is present also in the upward area.

When the upward area is open (Unit : mm)

(1) Obstacles at rear only

(2) Obstacles at front only

(3) Obstacles at front and rear only

When an obstruction is present also in the upward area (Unit : mm)

- Obstacles at rear and above only

3.3.3. Outdoor units installation in multi row (Unit : mm)

(1) Single parallel unit arrangement

(2) Multiple parallel unit arrangement

3.4. Transporting the unit

WARNING

Do not touch the fins.
Otherwise, personal injury could result.

CAUTION

When carrying the unit, hold the handles on the right and left sides and be careful.
If the outdoor unit is carried from the bottom, hands or fingers may be pinched.

- Carry slowly in the manner as shown on "Fig. B" holding the handles "Fig. A" in right and left sides. (Be careful not to touch with hands or objects.)
- Be sure to hold the handles on the sides of the unit. Otherwise, the suction grilles on the sides of the unit may be deformed.

Fig. A

Fig. B

3.5. Installation

(Unit : mm)

- Install 4 anchor bolts at the locations indicated with arrows in the above figure.
- To reduce vibration, do not install the unit directly on the ground. Install it on a secure base (such as concrete blocks).
- The foundation shall support the legs of the unit and have a width of 50 mm or more.
- Depending on the installation conditions, the outdoor unit may spread its vibration during operation, which may cause noise and vibration. Therefore, attach damping materials (such as damping pads) to the outdoor unit during installation.
- Install the foundation, making sure that there is enough space for installing the connection pipes.
- Secure the unit to a solid block using foundation bolts.
(Use 4 sets of commercially available M10 bolts, nuts, and washers.)
- The bolts should protrude 20 mm.
(Refer to the figure below.)
- If overturning prevention is required, purchase the necessary commercially available items.

Fix securely with bolts on a solid block. (Use 4 sets of commercially available M10 bolt, nut and washer.)

4. PIPE SELECTION

4.1. Selecting the pipe material

⚠ CAUTION

Do not use existing pipes.

Use pipes that have clean external and internal sides without any contamination which may cause trouble during use, such as sulfur, oxide, dust, cutting waste, oil, or water.

It is necessary to use seamless copper pipes.

Material: Phosphor deoxidized seamless copper pipes.

It is desirable that the amount of residual oil is less than 40 mg/10 m.

Do not use copper pipes that have a collapsed, deformed, or discolored portion (especially on the interior surface).

Otherwise, the expansion valve or capillary tube may become blocked with contaminants.

Improper pipe selection will degrade performance. As an air conditioner using R410A incurs pressure higher than when using conventional refrigerant, it is necessary to choose adequate materials.

- Thicknesses of copper pipes used with R410A are as shown in the table.
- Never use copper pipes thinner than those indicated in the table even if they are available on the market.

Thicknesses of Annealed Copper Pipes (R410A)

Pipe outside diameter [mm (in.)]	Thickness [mm]
6.35 (1/4)	0.80
9.52 (3/8)	0.80
12.70 (1/2)	0.80
15.88 (5/8)	1.00
19.05 (3/4)	1.20

4.2. Protection of pipes

- Protect the pipes to prevent the entry of moisture and dust.
- Especially, pay attention when passing the pipes through a hole or connecting the end of a pipe to the outdoor unit.

Location	Working period	Protection method
Outdoor	1 month or more	Pinch pipes
	Less than 1 month	Pinch or tape pipes
Indoor	-	Pinch or tape pipes

4.3. Refrigerant pipe size and allowable piping length

⚠ CAUTION

Keep the piping length between the indoor unit and outdoor unit within the allowable tolerance.

Capacity [BTU/h class]	45,000	54,000
Pipe diameter <Liquid/Gas> [mm (in.)]	9.52 (3/8) / 15.88 (5/8)	
Max. piping length (L) [m]	50	
Min. piping length (L) [m]	5	
Max. height difference (H) <Indoor unit to outdoor unit> [m]	30	
View (Example)		

5. PIPE INSTALLATION-1

5.1. Opening a knock out hole

⚠ CAUTION

Be careful not to deform or scratch the panel while opening the knock out holes.

To protect the piping insulation after opening a knock out hole, remove any burrs from the edge of the hole. It is recommended to apply rust prevention paint to the edge of the hole.

- Pipes can be connected from 4 directions, front, lateral side, rear side and bottom. (Fig. A)
- When connecting at the bottom, remove the service panel and piping cover on the front of the outdoor unit, and open the knock out hole provided at the bottom corner of the piping outlet.
- It can be installed as shown on "Fig. B" cutting out the 2 slits as indicated on "Fig. C". (When cutting slits, use a steel saw.)

Fig. A

Fig. B

Fig. C

5.2. Brazing

⚠ CAUTION

If air or another type of refrigerant enters the refrigeration cycle, the internal pressure in the refrigeration cycle will become abnormally high and prevent the unit from exerting its full performance.

Apply nitrogen gas while brazing the pipes. If a pipe is brazed without applying nitrogen gas, an oxidation film will be created.

This can degrade performance or damage the parts in the unit (such as the compressor or valves).

Nitrogen gas pressure: 0.02 MPa
(= pressure felt sufficiently on the back of the hand)

For brazing material, use phosphor copper that does not require flux. Do not use flux to braze pipes. If the flux is the chlorine type, it will cause the pipes to corrode.

Furthermore, if the flux contains fluoride, it will adversely affect the refrigerant pipe system such as by degrading the refrigerant.

If fluoride is contained, quality of refrigerant deteriorates and affects the refrigerant piping system.

5.3. Flare connection (pipe connection)

⚠ CAUTION

Do not use mineral oil on a flared part. Prevent mineral oil from getting into the system as this would reduce the lifetime of the units.

While welding the pipes, be sure to blow dry nitrogen gas through them.

The maximum lengths of this product are shown in the table. If the units are further apart than this, correct operation cannot be guaranteed.

5.3.1. Flaring

- Use special pipe cutter and flare tool exclusive for R410A.

- Cut the connection pipe to the necessary length with a pipe cutter.
- Hold the pipe downward so that the cuttings will not enter the pipe and remove any burrs.
- Insert the flare nut (always use the flare nut attached to the indoor and outdoor units respectively) onto the pipe and perform the flare processing with a flare tool. Leakage of refrigerant may result if other flare nuts are used.
- Protect the pipes by pinching them or with tape to prevent dust, dirt, or water from entering the pipes.

Check if [L] is flared uniformly and is not cracked or scratched.

Pipe outside diameter [mm (in.)]	Dimension A [mm] Flare tool for R410A, clutch type
6.35 (1/4)	0 to 0.5
9.52 (3/8)	
12.70 (1/2)	
15.88 (5/8)	
19.05 (3/4)	

Pipe outside diameter [mm (in.)]	Dimension B _{0.4} [mm]
6.35 (1/4)	9.1
9.52 (3/8)	13.2
12.70 (1/2)	16.6
15.88 (5/8)	19.7
19.05 (3/4)	24.0

- When using conventional flare tools to flare R410A pipes, the dimension A should be approximately 0.5 mm more than indicated in the table (for flaring with R410A flare tools) to achieve the specified flaring. Use a thickness gauge to measure the dimension A.

Width across flats

Pipe outside diameter [mm (in.)]	Width across flats of Flare nut [mm]
6.35 (1/4)	17
9.52 (3/8)	22
12.70 (1/2)	26
15.88 (5/8)	29
19.05 (3/4)	36

5.3.2. Bending pipes

⚠ CAUTION

To prevent breaking of the pipe, avoid sharp bends. Bend the pipe with a radius of curvature of 100 mm to 150 mm.

If the pipe is bent repeatedly at the same place, it will break.

- If pipes are shaped by hand, be careful not to collapse them.
- Do not bend the pipes at an angle of more than 90°.
- When pipes are repeatedly bent or stretched, the material will harden, making it difficult to bend or stretch them any more.
- Do not bend or stretch the pipes more than three times.

5.3.3. Pipe connection

⚠ CAUTION

Be sure to install the pipe against the port on the indoor unit and the outdoor unit correctly. If the centering is improper, the flare nut cannot be tightened smoothly. If the flare nut is forced to turn, the threads will be damaged.

Do not remove the flare nut from the outdoor unit pipe until immediately before connecting the connection pipe.

After installing the piping, make sure that the connection pipes do not touch the compressor or outer panel. If the pipes touch the compressor or outer panel, they will vibrate and produce noise.

- Detach the caps and plugs from the pipes.
- Center the pipe against the port on the outdoor unit, and then turn the flare nut by hand.
- Tighten the flare nut of the connection pipe at the outdoor unit valve connector.

- After tightening the flare nut by hand, use a torque wrench to fully tighten it.

⚠ CAUTION

Hold the torque wrench at its grip, keeping it in a right angle with the pipe, in order to tighten the flare nut correctly.

- Outer panel may be distorted if fastened only with a wrench. Be sure to fix the elementary part with a spanner and fasten with a wrench (refer to below diagram).
- Do not apply force to the blank cap of the valve or hang a wrench, etc., on the cap. It may cause leakage of refrigerant.

Flare nut [mm (in.)]	Tightening torque [N·m (kgf·cm)]
6.35 (1/4) dia.	16 to 18 (160 to 180)
9.52 (3/8) dia.	32 to 42 (320 to 420)
12.70 (1/2) dia.	49 to 61 (490 to 610)
15.88 (5/8) dia.	63 to 75 (630 to 750)
19.05 (3/4) dia.	90 to 110 (900 to 1100)

5.3.4. Handling precautions for the valves

- Mounted part of Blank cap is sealed for protection.
- Fasten blank cap tightly after opening valves.

Table A

Blank cap [mm (in.)]	Tightening torque [N·m (kgf·cm)]
6.35 (1/4)	20 to 25 (200 to 250)
9.52 (3/8)	20 to 25 (200 to 250)
12.70 (1/2)	28 to 32 (280 to 320)
15.88 (5/8)	30 to 35 (300 to 350)
19.05 (3/4)	35 to 40 (350 to 400)

Operating the valves

- Use a hexagon wrench (size 4 mm).
- Opening
 - Insert the hexagon wrench into the valve shaft, and turn it counterclockwise.
 - Stop turning when the valve shaft can no longer be turned. (Open position)
- Closing
 - Insert the hexagon wrench into the valve shaft, and turn it clockwise.
 - Stop turning when the valve shaft can no longer be turned. (Closed position)

5.4. Sealing test

⚠ WARNING

Before operating the compressor, install the pipes and securely connect them. Otherwise, if the pipes are not installed and if the valves are open when the compressor operates, air could enter the refrigeration cycle. If this happens, the pressure in the refrigeration cycle will become abnormally high and cause damage or injury.

After the installation, make sure there is no refrigerant leakage. If the refrigerant leaks into the room and becomes exposed to a source of fire such as a fan heater, stove, or burner, it produces a toxic gas.

Do not subject the pipes to strong shocks during the sealing test. It can rupture the pipes and cause serious injury.

⚠ CAUTION

Do not block the walls and the ceiling until the sealing test and the charging of the refrigerant gas have been completed.

For maintenance purposes, do not bury the piping of the outdoor unit.

- After connecting the pipes, perform a sealing test.
- Make sure that the 3-way valves are closed before performing a sealing test.
- Pressurize nitrogen gas to 4.15 MPa to perform the sealing test.
- Add nitrogen gas to both the liquid pipes and the gas pipes.
- Check all flare connections and welds. Then, check that the pressure has not decreased.
- Compare the pressures after pressurizing and letting it stand for 24 hours, and check that the pressure has not decreased.
 - * When the outdoor air temperature changes 5 °C, the test pressure changes 0.05 MPa. If the pressure has dropped, the pipe joints may be leaking.
- If a leak is found, immediately repair it and perform the sealing test again.
- After completing the sealing test, release the nitrogen gas from both valves.
- Release the nitrogen gas slowly.

5.5. Vacuum process

⚠ CAUTION

Perform a refrigerant leakage test (air tightness test) to check for leaks using nitrogen gas while all valves in the outdoor unit are closed. (Use the test pressure indicated on the nameplate.)

Be sure to evacuate the refrigerant system using a vacuum pump.

The refrigerant pressure may sometimes not rise when a closed valve is opened after the system is evacuated using a vacuum pump. This is caused by the closure of the refrigerant system of the outdoor unit by the electronic expansion valve. This will not affect the operation of the unit.

If the system is not evacuated sufficiently, its performance will drop.

Use a clean gauge manifold and charging hose that were designed specifically for use with R410A. Using the same vacuum equipment for different refrigerants may damage the vacuum pump or the unit.

Do not purge the air with refrigerants, but use a vacuum pump to evacuate the system.

- (1) Check that the valves are closed by removing the blank caps from the gas and liquid pipes.
- (2) Remove the charging port cap, and connect the gauge manifold and the vacuum pump to the charging valve with the service hoses.
- (3) Vacuum the indoor unit and the connecting pipes until the pressure gauge indicates -0.1 MPa (-76 cmHg).
- (4) When -0.1 MPa (-76 cmHg) is reached, operate the vacuum pump for at least 60 minutes.
- (5) Disconnect the service hoses and fit the charging port cap to the charging valve to the specified torque. (Refer to below table)
- (6) Remove the blank caps, and fully open the spindles of 3-way valves with a hexagon wrench [Torque: 6 to 7 N·m (60 to 70 kgf·cm)].
- (7) Tighten the blank caps of the 3-way valve to the specified torque. (Refer to Table A in the previous page)

	Tightening torque [N·m (kgf·cm)]
Charging port cap	10 to 12 (100 to 120)

5.6. Additional charging

⚠ WARNING

When moving and installing the air conditioner, do not mix gas other than the specified refrigerant R410A inside the refrigerant cycle.

If air or other gas enters the refrigerant cycle, the pressure inside the cycle will rise to an abnormally high value and cause breakage, injury, etc.

⚠ CAUTION

After vacuuming the system, add refrigerant.

Do not reuse recovered refrigerant.

When charging the refrigerant R410A, always use an electronic scales for refrigerant charging (to measure the refrigerant by weight). Adding more refrigerant than the specified amount will cause a malfunction.

When charging the refrigerant, take into account the slight change in the composition of the gas and liquid phases, and always charge from the liquid phase side whose composition is stable. Adding refrigerant through the gas pipe will cause a malfunction.

Check if the steel cylinder has a siphon installed or not before filling. (There is an indication "with siphon for filling liquid" on the steel cylinder.)

Filling method for cylinder with siphon

Filling method for other cylinders

Be sure to use the special tools for R410A for pressure resistance and to avoid mixing of impure substances.

If the units are further apart than the maximum pipe length, correct operation can not be guaranteed.

Make sure to back closing valve after refrigerant charging. Otherwise, the compressor may fail.

Minimize refrigerant release to the air. Excessive release is prohibited under the Freon Collection and Destruction Law.

5.6.1. For Pre-charge length

Piping length (L) *Pre-Charge [m]
20

5.6.2. If additional refrigerant is required

- When the piping is longer than Pre-charge length, additional charging is necessary.
- For the additional amount, see the table below.

Additional charging amount

Refrigerant pipe size [mm (in.)]		Piping length (L)*				
		~20 m	30 m	40 m	50 m	g/m
Liquid	9.52 (3/8)	None	400 g	800 g	1,200 g	40 g/m
Gas	15.88 (5/8)					

* Refer to "4.3. Refrigerant pipe size and allowable piping length".

6. ELECTRICAL WIRING

Cable	Cable size [mm ²]	Type	Remarks
Power Supply Cable	6	Type60245 IEC66	3 Cable + Ground 1 Φ 230 V
Connection Cable	1.5	Type60245 IEC57	3 Cable + Ground 1 Φ 230 V

Max. Cable Length : Limit voltage drop to less than 2%. Increase cable if voltage drop is 2% or more.

6.1. Notes for electrical wiring

⚠ WARNING
Wiring connections must be performed by a qualified person in accordance with the specifications. The voltage rating for this product is 230 V at 50 Hz. It should be operated within the range of 198 to 264 V.
Before connecting the wires, make sure the power supply is OFF.
Never touch electrical components immediately after the power supply has been turned off. Electrical shock may occur. After turning off the power, always wait 10 minutes or more before touching electrical components.
Use a dedicated power supply circuit. Insufficient power capacity in the electrical circuit or improper wiring may cause electric shock or fire.
Be sure to install a breaker of the specified capacity. When selecting breaker, please comply with the laws and the regulations of each country. One breaker must be installed on the power supply of the outdoor unit. Wrong selection and setup of the breaker will cause electric shock or fire.
When selecting breaker, please comply with the laws and the regulations of each country. One breaker must be installed on the power supply of the outdoor unit. Wrong selection and setup of the breaker will cause electric shock or fire.
Be sure to install an earth leakage breaker. Otherwise, it will cause electric shock or fire.
A circuit breaker is installed in the permanent wiring. Always use a circuit that can trip all the poles of the wiring and has an isolation distance of at least 3 mm between the contacts of each pole.
Use designated cables and power cables. Improper use may cause electric shock or fire by poor connection, insufficient insulation, or over current.
Do not modify power cable, use extension cable or branch wiring. Improper use may cause electric shock or fire by poor connection, insufficient insulation or over current.
Connect the connector cable securely to the terminal. Check no mechanical force bears on the cables connected to the terminals. Faulty installation can cause a fire.
Use crimp-type terminals and tighten the terminal screws to the specified torques, otherwise, abnormal overheating may be produced and possibly cause serious damage inside the unit.
Make sure to secure the insulation portion of the connector cable with the cable clamp. Damaged insulation can cause a short circuit.
Fix cables so that cables do not make contact with the pipes (especially on high pressure side). Do not make power supply cable and transmission cable come in contact with valves (Gas).
Do not connect the AC power supply to the transmission line terminal board. Improper wiring can damage the entire system.
Never install a power factor improvement condenser. Instead of improving the power factor, the condenser may overheat.
Be sure to perform the grounding work. Do not connect grounding wires to a gas pipe, water pipe, lightning rod or grounding wire for a telephone. <ul style="list-style-type: none"> Connection to a gas pipe may cause a fire or explosion if gas leaks. Connection to a water pipe is not an effective grounding method if PVC pipe is used. Connection to the grounding wire of a telephone or to a lightning rod may cause a dangerously abnormal rise in the electrical potential if lightning strikes. Improper grounding work can cause electric shocks.
Securely install the electrical box cover on the unit. An improperly installed service panel can cause serious accidents such as electric shock or fire through exposure to dust or water.

⚠ CAUTION

The primary power supply capacity is for the air conditioner itself, and does not include the concurrent use of other devices.
Do not use crossover power supply wiring for the outdoor unit.
If the electrical power is inadequate, contact your electric power company.
Install a breaker in a location that is not exposed to high temperatures. If the temperature surrounding the breaker is too high, the amperage at which the breaker cuts out may decrease.
When using an earth leakage breaker that has been designed solely for ground fault protection, be sure to install a fuse-equipped switch or circuit breaker.
Do not connect the AC power supply to the transmission line terminal board. Improper wiring can damage the entire system.
Do not use crossover power supply wiring for the outdoor unit.
If the temperature surrounding the breaker is too high, the amperage at which the breaker cuts out may decrease.
This system uses an inverter, which means that it must be used an earth leakage breaker that can handle harmonics in order to prevent malfunctioning of the earth leakage breaker itself.
When the electrical switchboard is installed outdoors, place it under lock and key so that it is not easily accessible.
Start wiring work after closing branch switch and over current breaker.
Transmission cable between indoor unit and outdoor unit is 230 V.
Be sure not to remove thermistor sensor etc. from power wiring and connection wiring. Compressor may fail if operated while removed.
Do not fasten the power supply cable and connection cable together.
Always keep to the maximum length of the connection cable. Exceeding the maximum length may lead to erroneous operation.
Do not start operation until the refrigerant is charged completely. The compressor will fail if it is operated before the refrigerant piping charging is complete.
The static electricity that is charged to the human body can damage the control PC Board when handling the control PC Board for address setting, etc. Please keep caution to the following points. Provide the grounding of Indoor unit, Outdoor unit and Option equipment. Cut off the power supply (breaker). Touch the metal section (such as the unpainted control box section) of the indoor or outdoor unit for more than 10 seconds. Discharge the static electricity in your body. Never touch the component terminal or pattern on the PC Board.

How to connect wiring to the terminal

Caution when wiring cable

- When stripping off the coating of a lead wire, always use a special tool such as a wire stripper. If there is no special tool available, carefully strip the coating with a knife etc.

- Use crimp-type terminals with insulating sleeves as shown in the figure below to connect to the terminal block.
- Securely clamp the crimp-type terminals to the wires using an appropriate tool so that the wires do not come loose.

- Use the specified wires, connect them securely, and fasten them so that there is no stress placed on the terminals.
- Use an appropriate screwdriver to tighten the terminal screws. Do not use a screwdriver that is too small, otherwise, the screw heads may be damaged and prevent the screws from being properly tightened.
- Do not tighten the terminal screws too much, otherwise, the screws may break.

- See the table below for the terminal screw tightening torques.

Tightening torque [N·m (kgf·cm)]	
M4 screw	1.2 to 1.8 (12 to 18)
M5 screw	2.0 to 3.0 (20 to 30)

6.2. Selecting circuit breaker and wiring

CAUTION

Be sure to install a breaker of the specified capacity.

Regulation of cables and breaker differs from each locality, refer in accordance with local rules.

Breaker and wiring specifications

Breaker capacity [A]	Earth leak- age breaker [mA]	Power supply cable	Transmission cable*	
		Conductor size [mm ²]	Conductor size [mm ²]	Max. length [m]
30	30	6	2.5	50

- Selected sample: Select the correct cable type and size according to the country or region's regulations.
- Max. wire length: Set a length so that the voltage drop is less than 2%. Increase the wire diameter when the wire length is long.
- Select the appropriate breaker of the described specification according to the national or regional standards.
- Select the breaker that enough load current can pass through it.
- Before starting work check that power is not being supplied to all poles of the indoor unit and outdoor unit.
- Install all electrical works in accordance to standard.
- Install the disconnect device with a contact gap of at least 3mm in all poles nearby the units. (Both indoor unit and outdoor unit)
- Wiring size must comply with the applicable local and national code.

6.3. Knock out holes for wiring

CAUTION

Be careful not to deform or scratch the panel while opening the knock out holes.

When cables are routed from the unit, a protection sleeve for the conduits can be inserted at the knock out hole.

If you do not use a wire conduit, be sure to protect the wires to prevent the edge of the knock out hole from cutting the wires.

It is recommended to apply anti-rust paint to the edge of the knock out hole.

- Knock out holes are provided for wiring. (Fig. A)
- Knock out holes are provided 2 each in the same size in front, lateral and rear sides.

Fig. A

Installation method of One-touch bush

Please fix the One-touch bush (accessory) as shown below. (Fig. B)

Fig. B

Note : Please ensure that the power cable and interconnecting cables are not installed through the same cable bush hole opening. They must be installed into the two separate hole openings to prevent damage to the cable.

6.4. Wiring method

6.4.1. Connection diagrams

6.4.2. Connection cable preparation

- Keep the earth wire longer than the other wires.

6.4.3. Wiring procedure

- Remove the service panel, the terminal cover and connect the wires to the terminal in accordance with the terminal nameplate. (Fig. A, Fig. B)

Fig. A

- After connecting the wires, use cable clips to secure the wires. (Fig. B)

Fig. B

- (3) Secure the cables using the cable clips under the terminal blocks, and then secure the cables using the cable clips attached to the base of the valves.

- (4) Be sure to install the terminal cover after the wiring is complete.

7. PIPE INSTALLATION-2

WARNING

Install the insulated pipes so that they do not touch the compressor.

7.1. Installing insulation

- Use an insulation on the refrigerant pipes to prevent condensation and dripping. (Fig. A)
- Determine the thickness of the insulation material by referring to Table A.

Table A, Selection of insulation

(for using an insulation material with equal heat transmission rate or below 0.040 W/(m·k))

Relative humidity [mm (in.)]		Insulation material			
		Minimum thickness [mm]			
Pipe diameter	6.35 (1/4)	70% or more	75% or more	80% or more	85% or more
	9.52 (3/8)	8	10	13	17
	12.70 (1/2)	9	11	14	18
	15.88 (5/8)	10	12	15	19
	19.05 (3/4)	10	12	16	20

- If the ambient temperature and relative humidity exceed 32 °C, increase the level of heat insulation for the refrigerant pipes.

7.2. Filling with putty

WARNING

Fill the piping holes and wiring holes with putty (supplied locally) to avoid any gap (Fig. A). If small animals such as insects enter the external unit, a short circuit may be caused near electrical components in the service panel.

- If the outdoor unit is installed at a level that is higher than the indoor unit, the water that has condensed in the 3-way valve of the outdoor unit could travel to the indoor unit. Therefore, use putty in the space between the pipe and the insulation to prevent the entry of water to the indoor units.

Fig. A

8. HOW TO OPERATE DISPLAY UNIT

8.1. Display unit position

WARNING

Never touch electrical components such as the terminal blocks except the button on the display board. It may cause a serious accident such as electric shock.

CAUTION

Once refrigerant charging is completed, be sure to open the valve prior to performing the local settings. Otherwise, the compressor may fail.

Discharge any static electricity from your body before touching the push buttons. Never touch any terminal or pattern of any parts on the control board.

- The positions of the buttons on the outdoor unit control board are shown in the figure below.

- Various settings can be adjusted by changing Push buttons on the board of the outdoor unit.

- The printed characters for the LED display are shown below.

8.2. Description of display and button

Display lamp		Function or operation method
(1) POWER / MODE	Green	Lights on while power on. Local setting in outdoor unit or error code is displayed with blink.
(2) ERROR	Red	Blinks during abnormal air-conditioner operation.
(3) PUMP DOWN (L1)	Orange	Lights on during pump down operation.
(4) LOW NOISE MODE (L2, L3)	Orange	Lights on during "Low noise" function when local setting is activated. (Lighting pattern of L2 and L3 indicates low noise level) *See page 12.
(5) PEAK CUT (L4, L5, L6)	Orange	Lights on during "Peak cut" function when local setting is activated. (Lighting pattern of L4, L5 and L6 indicates peak cut level) *See page 12.

Button		Function or operation method
SW1	MODE	To switch between "Local setting" and "Error code display".
SW2	SELECT	To switch between the individual "Local settings" and the "Error code displays".
SW3	ENTER	To fix the individual "Local settings" and the "Error code displays".
SW4	EXIT	To return to "Operation status displays."
SW5	PUMP DOWN	To start the pump down operation.

9. FIELD SETTING

⚠ CAUTION

Discharge the static electricity from your body before setting up the switches.
Never touch the terminals or the patterns on the parts that are mounted on the board.

9.1. Field setting buttons

- Remove the front panel of the outdoor unit access the print circuit board of the display unit.

Print circuit board buttons for various settings and LED displays are shown in the figure.

9.2. Function settings

- Various functions can be set. Follow the setting method described in 9.2.1. to set as per the requirement.
Perform these settings after the indoor unit stops.

Table. Settings List

No	Setting Item		LED display								Factory setting	Content
			POWER MODE	ERROR	PUMP DOWN (L1)	LOW NOISE (L2) (L3)		PEAK CUT (L4) (L5) (L6)				
1	Low noise mode setting	Level 1	Blink (9 times)	○	○	○	●	○	○	●	○	The noise level when operating in the low noise mode can be set. The operation selection can be done by external input terminal(CN10). Cooling/heating performance decreases by lowering operation noise level.
		Level 2	Blink (9 times)	○	○	○	●	○	●	○		
2	Peak cut mode setting	Level 1	Blink (9 times)	○	○	●	○	○	○	●		The capacity limit can be selected when operating with the "Peak Cut mode." The operation selection can be done by external input terminal(CN11).
		Level 2	Blink (9 times)	○	○	●	○	○	●	○		
		Level 3	Blink (9 times)	○	○	●	○	○	●	●		The lower the level, the more the effect of energy saving, but the cooling/heating performance decreases.
		Level 4	Blink (9 times)	○	○	●	○	●	○	○	○	

Sign "○": Lights off, "●": Lights on

9.2.1. Setting for low noise mode

- Switch to "Local setting mode" by pressing [MODE] button (SW1) for 3 seconds or more.
- Confirm (POWER / MODE) blinks 9 times, and press [ENTER] button (SW3).

POWER MODE	ERROR	PUMP DOWN (L1)	LOW NOISE (L2) (L3)		PEAK CUT (L4) (L5) (L6)		
Blink (9 times)	○	○	○	○	○	○	○

Sign "○": Lights off, "●": Lights on, () : Number of blinking

- Press [SELECT] button (SW2), and adjust LED display as shown below. (Current setting is displayed)

LOW NOISE (L2) (L3)	
LOW NOISE MODE	○ Blink

Sign "○": Lights off

- Press [ENTER] button (SW3).

LOW NOISE (L2) (L3)	
LOW NOISE MODE	○ ●

Sign "○": Lights off, "●": Lights on

- Press [SELECT] button (SW2), and adjust LED lamp as shown in below figure.

PEAK CUT (L4) (L5) (L6)		
Level 1	○	○ Blink
Level 2	○	Blink ○

Sign "○": Lights off

The noise of Level 2 is lower than the one of Level 1.

- Press [ENTER] button (SW3) and fix it.

PEAK CUT (L4) (L5) (L6)		
Level 1	○	○ ●
Level 2	○	● ○

Sign "○": Lights off, "●": Lights on

- Return to "Operating status display (Normal operation)" by pressing [EXIT] button (SW4).

- In case of missing how many times [SELECT] and [ENTER] button are pressed, restart from the beginning of operation procedure after returning to "Operation status display (normal operation)" by pressing the [EXIT] button once.

9.2.2. Setting for peak cut mode

- Switch to "Local setting mode" by pressing [MODE] button (SW1) for 3 seconds or more.
- Confirm (POWER / MODE) blinks 9 times, and press [ENTER] button (SW3).

POWER MODE	ERROR	PUMP DOWN (L1)	LOW NOISE (L2) (L3)		PEAK CUT (L4) (L5) (L6)		
Blink (9 times)	○	○	○	○	○	○	○

Sign "○": Lights off, "●": Lights on, () : Number of blinking

- Press [SELECT] button (SW2), and adjust LED lamp as shown below. (Current setting is displayed)

LOW NOISE (L2) (L3)	
PEAK CUT MODE	Blink ○

Sign "○": Lights off

- Press [ENTER] button (SW3).

LOW NOISE (L2) (L3)	
PEAK CUT MODE	● ○

Sign "○": Lights off, "●": Lights on

- Press [SELECT] button (SW2), and adjust LED lamp as shown in below figure.

		PEAK CUT (L4) (L5) (L6)		
Level 1	0% of rated input ratio	○	○	Blink
Level 2	50% of rated input ratio	○	Blink	○
Level 3	75% of rated input ratio	○	Blink	Blink
Level 4	100% of rated input ratio	Blink	○	○

Sign "○": Lights off

- Press [ENTER] button (SW3) and fix it.

		PEAK CUT (L4) (L5) (L6)		
Level 1	0% of rated input ratio	○	○	●
Level 2	50% of rated input ratio	○	●	○
Level 3	75% of rated input ratio	○	●	●
Level 4	100% of rated input ratio	●	○	○

Sign "○": Lights off, "●": Lights on

- Return to "Operating status display (Normal operation)" by pressing [EXIT] button (SW4).

- When pressed number is lost during operation, restart from the beginning of operation procedure after returning to "Operation status display (normal operation)" by pressing the [EXIT] button once.

10. EXTERNAL INPUT AND OUTPUT

10.1. External input

10.1.1. Wiring of connector

ON/OFF of the "Low noise mode", and "Peak cut mode" functions can be enabled with an external field device.

When installing connection cable, specified part (optional parts) must be used.

Refer to section 9.2. Table. Settings List, for the required function. The function must be set for the external input to work.

Input	Connector
Low noise mode	CN10
Peak cut mode	CN11

* Make the distance from the PC board to the connected unit within 10m (33ft).

- Contact capacity : 24VDC or more, 10mA or more.

Circuit diagram example

10.1.2. Low noise mode (CN10)

- This feature reduces the operating sound of the outdoor unit from the normal sound. The air conditioner is set to the "Low noise mode" when closing the contact input of a commercial timer or ON/OFF switch to a connector on the outdoor control PC board.
- Performance may drop depending on the outside air temperature condition, etc.
- Set the "Low noise mode" level, refer to "9.2. Function settings".

Input Signal ...ON : Low noise mode
...OFF : Normal operation

10.1.3. Peak cut mode (CN11)

- Operation that suppressed the current value can be performed by means of the connected unit. The air conditioner is set to the Peak cut mode by applying the contact input of a commercial ON/OFF switch to a connector on the outdoor control PC board.
- Set the "Peak cut mode" level, refer to "9.2. Function settings".

Input Signal ...ON : Peak cut mode
...OFF : Normal operation

10.2. External output

10.2.1. Wiring of connector

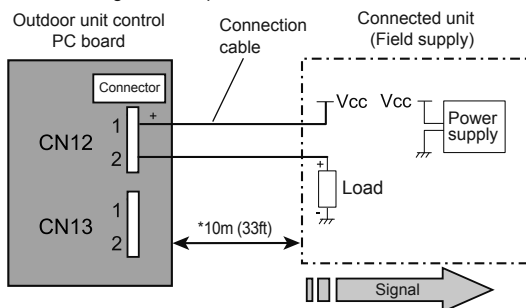

When installing connection cable, specified part (optional parts) must be used.

Output	Connector
Error status	CN12
Compressor status	CN13

* Make the distance from the PC board to the connected unit within 10m (33ft).

- Power supply
 - Voltage (Chart sign=Vcc) : DC 24V or less
- Load
 - Load : DC 500mA or less is recommended

Circuit diagram example

10.2.2. Error status output (CN12)

An air conditioner error status signal is produced when a malfunction occurs.

10.2.3. Compressor status output (CN13)

Compressor operation status signal is produced when the compressor is running.

11. TEST RUN

11.1. Pre-test run check items

Before the test operation, refer to the figure and check the following items.

<input type="checkbox"/> Is the outdoor unit securely installed?
<input type="checkbox"/> Have you performed gas leakage inspection? (Connection joints of various pipes (flange connection, brazing))
<input type="checkbox"/> Is the heat insulation done completely? (Gas pipe, liquid pipe, drain hose extension on indoor unit side etc)
<input type="checkbox"/> Is the water discharging from drain without any problems?
<input type="checkbox"/> Are the cables connected correctly?
<input type="checkbox"/> Are the cables as per specifications?
<input type="checkbox"/> Is the earth wire connected accurately?
<input type="checkbox"/> Are there any obstacles blocking the suction gate, and outlet of the indoor/outdoor units?
<input type="checkbox"/> Have you filled the specified amount of refrigerant?
<input type="checkbox"/> Are the stop valves of gas pipe and liquid pipe fully open?
<input type="checkbox"/> Has the power been supplied to crankcase heater for more than 6 hours?

After checking that the above items are all in order, refer to "11.2. Test operation method" to test operation the unit. If there are problems, adjust immediately and recheck.

11.2. Test operation method

Be sure to configure test run settings only when the outdoor unit has stopped operating.

- Depending on the communication status between the indoor and outdoor units, it may take several minutes for the system to start operating after settings for the test run are complete.
- After the test run settings are complete, the outdoor units and the connected indoor units will start operating. Room temperature control will not activate during test operation (continuous operation).
- If a knocking sound can be heard in the liquid compression of the compressor, stop the unit immediately and then energize the crank case heater for a sufficient length of time before restarting the operation.

Test operation setting method (It can be performed in the following two ways)

- Set with test operation setting (refer to installation instructions manual of indoor unit for further details) available in the remote controller.
- "Cooling Operation" and "Heating Operation" can be set using SELECT button and ENTER button available on the board of display unit.

(*Make sure to perform the first test operation with cooling operation.)

Set as per the procedure given below.

11.2.1. Setting method on outdoor unit board

- Turn on the power of the outdoor unit and enter standby mode. "POWER/MODE" Lamp lights up.

POWER	ERROR	PUMP DOWN (L1)	LOW NOISE (L2) (L3)		PEAK CUT (L4) (L5) (L6)		
MODE			(L2)	(L3)	(L4)	(L5)	(L6)
●	○	○	○	○	○	○	○

Sign "○": Lights off, "●": Lights on

- Press the ENTER button for more than 3 seconds.

POWER	ERROR	PUMP DOWN (L1)	LOW NOISE (L2) (L3)		PEAK CUT (L4) (L5) (L6)		
MODE			(L2)	(L3)	(L4)	(L5)	(L6)
Blink	○	○	○	Blink	○	○	○

Sign "○": Lights off, "●": Lights on

- Press the SELECT button, LED of the test run mode Switched between "COOL" and "HEAT".

Cooling test mode

POWER	ERROR	PUMP DOWN (L1)	LOW NOISE (L2) (L3)		PEAK CUT (L4) (L5) (L6)		
MODE			(L2)	(L3)	(L4)	(L5)	(L6)
Blink	○	○	○	Blink	○	○	○

Sign "○": Lights off, "●": Lights on

Heating test mode

POWER	ERROR	PUMP DOWN (L1)	LOW NOISE (L2) (L3)		PEAK CUT (L4) (L5) (L6)		
MODE			(L2)	(L3)	(L4)	(L5)	(L6)
Blink	○	○	Blink	○	○	○	○

Sign "○": Lights off, "●": Lights on

- After confirming the operation mode, Press ENTER button. The display changes as follows, and Air conditioner starts operation.

Cooling test mode

POWER	ERROR	PUMP DOWN (L1)	LOW NOISE (L2) (L3)		PEAK CUT (L4) (L5) (L6)		
MODE			(L2)	(L3)	(L4)	(L5)	(L6)
Blink	○	○	○	●	○	○	○

Sign "○": Lights off, "●": Lights on

Heating test mode

POWER	ERROR	PUMP DOWN (L1)	LOW NOISE (L2) (L3)		PEAK CUT (L4) (L5) (L6)		
MODE			(L2)	(L3)	(L4)	(L5)	(L6)
Blink	○	○	●	○	○	○	○

Sign "○": Lights off, "●": Lights on

- Press [ENTER] button.

Air conditioner stopped operation.

POWER	ERROR	PUMP DOWN (L1)	LOW NOISE (L2) (L3)		PEAK CUT (L4) (L5) (L6)		
MODE			(L2)	(L3)	(L4)	(L5)	(L6)
●	○	○	○	○	○	○	○

Sign "○": Lights off, "●": Lights on

11.3. Checklist

Check items during test operation.

<input type="checkbox"/>	Is the outdoor unit making any abnormal noise or vibrating significantly?
<input type="checkbox"/>	Is the cold air or hot air blowing from indoor unit according to the operation mode?
<input type="checkbox"/>	Check that the "ERROR" LED blinks. If, it has displayed, check the error content as per 12.2. described later.
<input type="checkbox"/>	Operate the unit according to the operating manual provided with the indoor unit, and check that it is operating normally.

12. LED DISPLAY

You can determine the operating status by the lighting up and blinking of the LED lamp.

12.1. Error display mode

Display when an error occurs.

POWER	ERROR	PUMP DOWN (L1)	LOW NOISE (L2) (L3)		PEAK CUT (L4) (L5) (L6)		
MODE			(L2)	(L3)	(L4)	(L5)	(L6)
●	Blink (Hi speed)	○	○	○	○	○	○

Sign "○": Lights off, "●": Lights on

- Check that the "ERROR" LED blinks, then press the [ENTER] button once.

12.2. Error code check table

DESCRIPTION	REMARK	LED display							
		POWER MODE	ERROR	PUMP DOWN (L1)	LOW NOISE (L2) (L3)		PEAK CUT (L4) (L5) (L6)		
Serial communication error	Serial forward transmission error immediately after operation	Blink (2 times)	●	Blink (1 time)	Blink (1 time)	○	○	●	●
	Serial forward transmission error during operation	Blink (2 times)	●	Blink (1 time)	Blink (1 time)	○	●	○	○

Sign "○": Lights off, "●": Lights on

13. PUMP DOWN

⚠ WARNING

Never touch electrical components such as the terminal blocks except the button on the display board. It may cause a serious accident such as electric shock.

During the pump-down operation, make sure that the compressor is turned off before you remove the refrigerant piping.

Do not remove the connection pipe while the compressor is in operation with 2-way or 3-way valve open. This may cause abnormal pressure in the refrigeration cycle that leads to breakage and even injury.

⚠ CAUTION

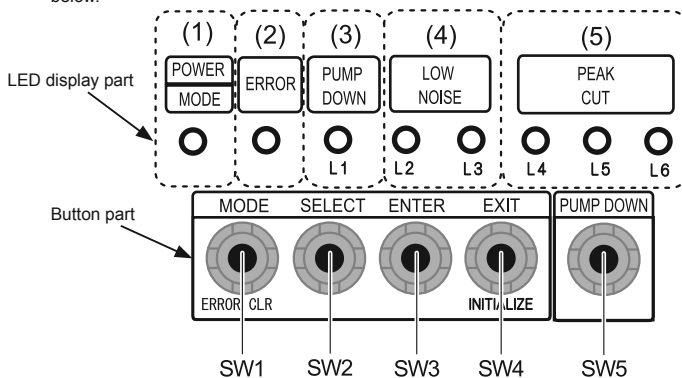

Perform the pump down operation before disconnecting any refrigerant pipe or electric cable.

Collect refrigerant from the service port or the 3-way valve if pump down cannot be performed.

In case of a group control system installation, do not turn the power off pump down is completed in all outdoor units.

(Group control system installation described in "SPECIAL INSTALLATION METHODS" in the installation manual of the indoor unit.)

- Operate [PUMP DOWN] button on the display board in the manner described below.

13.1. Preparation for pump down

- Confirm that the power is off, and then open the service panel.

13.2. Pump down procedure

- Check the 3-way valves (both the liquid side and gas side) are opened.
- Turn the power on.

POWER	ERROR	PUMP DOWN (L1)	LOW NOISE (L2) (L3)		PEAK CUT (L4) (L5) (L6)		
MODE							
●	○	○	○	○	○	○	○

Sign "○": Lights off, "●": Lights on

- Press [PUMP DOWN] button for 3 seconds or more after 3 minutes after power on.

POWER	ERROR	PUMP DOWN (L1)	LOW NOISE (L2) (L3)		PEAK CUT (L4) (L5) (L6)		
MODE							
●	○	●	○	○	●	●	●

Sign "○": Lights off, "●": Lights on

LED display lights on as shown in the above figure, and the fans and the compressor start operating.

- If the [PUMP DOWN] button is pressed while the compressor is operating, the compressor will stop, then start again in about 3 minutes.

- LED display will change as shown below about 3 minutes after the compressor starts. Fully close the 3-way valve on the liquid pipe side at this stage.

POWER	ERROR	PUMP DOWN (L1)	LOW NOISE (L2) (L3)		PEAK CUT (L4) (L5) (L6)		
MODE							
●	○	●	○	○	○	●	●

Sign "○": Lights off, "●": Lights on

- If the valve on the liquid pipe side is not closed, the pump down cannot be performed.

- When LED display changes as shown in the below figure, close the 3-way valve on the gas pipe side tightly.

POWER	ERROR	PUMP DOWN (L1)	LOW NOISE (L2) (L3)		PEAK CUT (L4) (L5) (L6)		
MODE							
●	○	●	○	○	○	○	●

Sign "○": Lights off, "●": Lights on

- If the valve on the gas pipe side is not closed, refrigerant may flow into the piping after the compressor stops.

- LED display changes after 1 minute as shown in the figure below.

POWER	ERROR	PUMP DOWN (L1)	LOW NOISE (L2) (L3)		PEAK CUT (L4) (L5) (L6)		
MODE							
○	○	○	○	○	○	○	○

Sign "○": Lights off, "●": Lights on

Fans and compressor stop automatically.

- If the pump down is successfully completed (the above LED display is shown), the outdoor unit remains stopped until the power is turned off.

- Turn the power off.

POWER	ERROR	PUMP DOWN (L1)	LOW NOISE (L2) (L3)		PEAK CUT (L4) (L5) (L6)		
MODE							
○	○	○	○	○	○	○	○

Sign "○": Lights off

PUMP DOWN is completed.

(Note)

- To stop pump down, press the [PUMP DOWN] button again.
- To start the pump down again after the compressor is automatically stopped due to an error, turn the power off and open the 3-way valves. Wait 3 minutes, turn the power on and start the pump down again.
- When starting the operation after completion of the pump down, turn the power off, and then open the 3-way valves. Wait 3 minutes, turn the power on and perform a test run in the "COOL" operation mode.
- If an error occurs, recover the refrigerant from service port.
